

***RENAISSANCE TOKEN***

*"Rebirth Of Money"*

# *Renaissance Token*

In today's technology age, Bitcoin, which is described as the reinvention of money, so to speak, and the revolution created by its successors and in this period when the world tries to adapt and integrate it, countless crypto currencies have emerged. We see that some of them are working centrally, while others are released to the decentralized market. Although some investors do not attach much importance to centralization, as a result, there are themes that all meet at a common point. Because investors are either trying to find a store of value or try to realize profits in the short, medium and long term.

Although the presence of corporate firms in this market is positive, it also has negative effects. If we look at their positive effects, they play a very important role in the legalization of cryptocurrencies. Thanks to privacy-focused cryptocurrency transfers, decentralization, limited circulating supply, and the reliability of blockchains, cryptocurrencies are inevitably spreading around the world. We decided to produce our own cryptocurrency using this Blockchain technology.

If we look at the negative effects, in a 24/7 speculative market, strong people playing the markets as they wish and profiting from these fluctuations cause cryptocurrencies with very high supply to be seen as a commercial product. However, on the contrary, we aim to launch a value storage and investment tool, not a commercial product. That's why we decided not to keep our total supply high.

## **1. What is Renaissance Token?**

Renaissance Token is a cryptocurrency designed under the TRC-20 based blockchain infrastructure. We preferred the more economical TRC-20 Blockchain infrastructure instead of the ERC-20 infrastructure due to its high fees.

Renaissance Token is a project that has set the rebirth of money as the guiding slogan and aims to lead people's way to enlightenment with new technology.

Our project, inspired by the year 1453, which is accepted as the starting date of the Renaissance, limited its total supply to 14,530,000 units.

## **2. Trustworthiness of Renaissance Token**

Since our project is still very fresh, people may hesitate to approach this project. In order to ensure this trust, we will try to cooperate with various exchanges and try our best to enlarge our project.

We are currently serving with the TRC-20 network due to technological difficulties. The first step we take to announce our name to the cryptocurrency world will be to drive our own crypto money. You can be sure that we will develop our project not only nationally but globally.

### 3. How to Make a P2P Peer-to-Peer Money Transfer?

In order to transfer money between individuals, it is necessary to have a TRC-20 based Renaissance Token wallet address on both sides. Money transfers are made anonymously with the assurance of Tron Network. Thanks to blockchain technology, you can transfer crypto money to anyone from all over the world within minutes.

### 4. Goals Of Renaissance Token

Among the long-term goals of Rönensans Token, the first will be to reach a certain market volume. In the following periods; With the reputation it has gained with the trust index, it will meet more investors and will establish its own exchange with the blockchain chain that it will create in cooperation with this team by establishing a competent team.

- **How We Will Reach Market Volume?**

1) To make our name known globally by working hand in hand with small investors, who are our only partners for now, and to try to reach our goal in this difficult road by transforming into a big brand and bringing it to our investors.

2) By adding great value to all our investors regardless of whether they are big or small.

3) By serving as a digital payment system in case the paper money transfer is finished in the market. But for now, we will delay this goal for a long time. Because we need to develop our own blockchain for this.

4) By making a value index with respect to Bitcoin instead of local currencies. In this way, integration with cryptocurrencies will develop faster.
